Excerpt: . . . 1. INTRODUCTION Various environmental studies have involved the analyses of marine sediments and tissues for toxic contaminants such as chlorinated pesticides, polychlorinated biphenyls, and aromatic hydrocarbons. High quality data with documented quality assurance is needed for such analyses in order to draw valid conclusions and reach appropriate decisions; for example, in damage assessment situations, for policy making, and to facilitate comparisons of the results with those of other studies. New techniques are continually sought and evaluated to further optimize the analytical accuracy, precision, sensitivity, robustness, efficiency, and safety. The Environmental Assessment Program of the Environmental Conservation Division of the National Marine Fisheries Services Northwest Fisheries Science Center ( NWFSC ) develops and employs advanced methods for analyzing marine environmental samples for organic contaminants at part-per-billion concentrations. As improvements to procedures are validated, they are incorporated into the analytical protocols that are used for a multitude of projects in which selected aromatic hydrocarbons...
