Is intended to facilitate the solution of the problem for finding the latitude of a /hip at sea, having the latitude by account, two observed altitudes of the fun, the time elapsed between the observations, measured by a common watch, and the sun s declination. The solution of this very useful problem, on these principles, was first invented by Mr. Cornells DotnueSs examiner, of the sea officers and plots by the appointment of the right honourable College of Admiralty at Am b sterdam, sterdam, about the year 1740. They were some time since transmitted by him to the Lords Commissioners of the English Admiralty; and Mr. Douwes was rewarded with 50l. by the Commissioners of Longitude. It has since been found that they may be usefully applied in the solution of other problems, for which purpose the column, intituled log. rising, has been extended to 9 hours. TABLE XVII. Is a Table of natural sines, which are wanted in computing the latitude of a fliip at sea by means of the preceding table: they will also be found useful on some other occasions, as will be (hewn in the course of the following rules and examples. TABLE XVIII. Contains the logarithms of natural numbers, from 1 to 10,000; and to five decimal places of figures, which is as far as they are generally wanted in the practice of navigation. The index must be prefixed by...
